# IELTS Writing Task 1 Process Diagram

**The diagram below shows the production and processing of milk production for commercial sale**

Summarise the information by selecting and reporting the main features, and make comparisons where relevant. Write at least 150 words. You should spend about 20 minutes on this task.

The diagram below shows the process of milk production

## Model Answer 1

The diagram shows the various stages of milk processing methods and the production of dairy products, milk packets, and their techniques.

Looking at the diagram as a whole, it is evident that there are eight stages involved in this milk production process that starts with cows grazing and ends with the final products reaching the demanded customers.

To begin with, the milk production starts with the cows grazing, and then they are milked by the automated milking machine twice a day. In the next stage, the fresh milk is stored in the huge refrigerator storage before delivery to the dairy.

The processes of milk collecting, storing, and transporting to dairy factories are repeated daily.

Once fresh milk is delivered to the dairy, some of the milk is pasteurised and packaged to prepare for delivery. Moreover, the remaining milk is converted into dairy products such as cheese, cream, and butter. Ultimately, the final products are moved to supermarkets for sale to customers.

## Model Answer 2

The given diagram displays how the production and processing of milk production are done for commercial sale and which method of secretion is involved.

According to the given diagram, the process undergoes eight stages to produce the milk products and milk packets from fresh milk.

In the initial stage, cows are let to eat grass on land, which makes them produce milk. Twice a day, milk is collected from the cows using the automated milking machine. Then, milk is stored in a large refrigerated storage container to protect the freshness of the milk.

In the subsequent stage, the milk is transported to the dairy factory to create further milk products. After it reaches the dairy, some of the milk is pasteurised and packaged for delivery and the rest of the milk is allowed to make different dairy products like cheese, cream, and butter. Lastly, the resulting products are ready for sale to customers.
